

TB4 machine

With **LARGE COUNTS** of 500 to 1000 plus, the machine is also operating at maximum output, but the operator will have more time to concentrate on other work such as manual cottoning or capping.

Labour costs are therefore minimised. Other counting methods (by weight etc.) are invariably less efficient and cannot offer the same accuracy and time-saving advantages incorporated in the KING system.

WHAT DO OUR CUSTOMER'S GET WITH EACH MACHINE?

1. A GMP machine — easily dismantable and cleaned. No tablet traps.
2. A large capacity removable fibre-glass hopper with no seams to trap dust.
3. A variable vibrator giving exceptionally smooth feed, fitted with stainless steel liner and dust/chip removal chute.
4. A rotating glass disc which does not mark or contaminate tablets.
5. An adjustable scroll arrangement to gently orientate the tablets into a single row and pass them through the wide-beam differential light source.
6. A simple flap mechanism to divert tablets accurately after completion of a pre-set batch count.
7. The latest and most reliable technique in electronic counting and batching systems.
8. A light sensitive amplifier head that remains completely effective even when counting very dusty tablets.
9. An electronic system not effected by voltage fluctuation and ambient light.
10. The whole unit is easily serviced and the electronic batch counter is interchangeable from one machine to another.
11. The electronic counter has a built-in test system together with resettable meter which records the total number of containers filled.
